

Mohnish Shende

OSINT Research | Vulnerability Assessment | Cybersecurity | Intelligence Analysis

+91 7020172261 @ mohnishshende4@gmail.com https://www.mohnish.ink LinkedIn Google Scholar Nagpur, India

SUMMARY

Cybersecurity professional with experience in vulnerability assessment, OSINT research, Linux infrastructure, and security analysis. Hands-on with Nessus, Burp Suite, Nmap, Python tooling, and self-hosted systems. MSc Cyber Security graduate with peer-reviewed research experience and a focus on rigorous, evidence-based technical reporting.

EXPERIENCE

Project Associate I

CSIR – National Environmental Engineering Research Institute

12/2024 - 03/2025 Nagpur, India

- Conducted vulnerability assessments using Nessus and Burp Suite.
- Supported network segmentation and access-control policy implementation.
- Documented secure-configuration baselines and system-hardening guidelines.
- Prepared technical reports and conducted OSINT analysis for security assessments using SearXNG and other research tools.

EDUCATION

Master of Science in Cyber Security | Merit

University of Plymouth

Plymouth, United Kingdom

- NCSC-certified Master's programme in Cyber Security
- Academic year: 2023 to 2024

Bachelor of Engineering in Information Technology | Distinction

St. Vincent Pallotti College of Engineering & Technology

Nagpur, India

- B.E. Information Technology, 2022

SKILLS

Security tooling

Nmap

Nessus

Burp Suite

command allowlisting

scan-result parsing

OSINT

passive reconnaissance

Infrastructure

Linux

Debian 13

Docker

Docker Compose

Caddy

Pi-hole

Unbound

Tailscale

Samba

SSH

nftables

systemd

Development

Python

Flask

REST API integration

XML

JSON

Markdown

requests

xmlltodict

tracemalloc

Research and documentation

technical reporting

technical writing

source verification

evidence evaluation

confidence labeling

Open-source intelligence analysis

chronology reconstruction

forensic/intelligence-style assessment

LANGUAGES

English

PROJECTS

NodeZero

github.com/MohnishShende/NodeZero

Built and documented a self-hosted homelab using Linux, Docker, Pi-hole, Unbound, Caddy, Tailscale, and Samba, with internal DNS, HTTPS, remote access, and monitoring.

NIA OSINT Security Reconnaissance Dossier

- Compiled and submitted a security reconnaissance dossier concerning nia.gov.in to CERT-In, focused on service exposure, web metadata, and remediation reporting.
- Documented Drupal version disclosure, installation-path exposure, custom authentication portal and resource structures, public file and analytics exposure, and security-header observations.
- Organized findings with severity labels, technical evidence, risk notes, positive controls, and remediation recommendations.
- Received a response from CERT-In regarding the submitted dossier.

Engineering Assurance Assessment of the Election Commission of India Electronic Voting Machine Ecosystem

<https://github.com/MohnishShende/ECI-EVM-Engineering-Assurance>

Independent engineering-assurance assessment of the Election Commission of India Electronic Voting Machine ecosystem, focused on evaluating publicly available technical evidence and the support it provides for specific security and assurance claims.

- Applied evidence extraction, claim normalization, traceability, and structured technical assessment.
- Evaluated documented system characteristics and security claims against available evidence.
- Separated documented evidence, analytical inference, uncertainty, and unsupported claims to avoid overstating conclusions.
- Produced a traceable assessment framework for evaluating claims about the EVM ecosystem.

Somerton Man Intelligence Dossier

github.com/MohnishShende/somerton-man-intelligence-dossier

- Forensic research involving source analysis, claim verification, chronology reconstruction, uncertainty management, and long-form technical writing.
- Applied confidence language, source classification, and chronology controls to preserve uncertainty
- Produced a versioned dossier demonstrating structured investigation and research communication

nmap-llm

github.com/MohnishShende/nmap-llm

Python command-line tool that assists local Nmap scan planning, execution, result parsing, and report generation through local LLM-supported workflows

- Built CLI workflows for natural-language scan requests, explicit Nmap command execution, and analysis of existing Nmap XML files
- Converted Nmap XML output into structured JSON and Markdown reports for faster scan review
- Integrated local Ollama/Mistral configuration to support offline command-generation and triage workflows
- Added command allowlisting and disallowed-pattern checks to reduce unsafe scan-command handling

IBI-schemes

github.com/MohnishShende/IBI-schemes

Python implementation of identity-based identification and zero-knowledge authentication flows using local client/server simulations.

- Built protocol prototypes for EZKP, Fiat-Shamir, Sakai-Kashara, TNCIBI, and TwinSchnorr flows
- Created Flask-based key-generation endpoints and local protocol clients for authentication-flow simulation
- Used timing and tracemalloc profiling to inspect runtime and memory behavior
- Framed the project as educational cryptography prototyping, not production cryptographic software

The Operating Manual: Meditations on the Mind, Judgment, and Living Well

Amazon Kindle Publication

Mohnish Shende

🔗 <https://amzn.in/d/05Gt6PzK>

The Operating Manual is a practical guide to understanding the ways emotion, stress, mood, exhaustion, uncertainty, and cognitive bias can influence perception and judgment.

Rather than offering formulas for happiness or promising personal transformation, this book begins with a simpler problem: how do you think clearly when your own mind is under pressure?

Written as a manual to return to when needed, it explores how judgment can change during depression, anxiety, anger, shame, loneliness, exhaustion, hypomania and mania, as well as during ordinary periods of stress and uncertainty.
